#### **DETAILED ACTION**

1. This office action is in response to application filed on June 24, 2003. *Claims 1-9* are now pending in the application.

2. Applicant's election without traverse of *claims 1-7* in the reply filed on August 25, 2004 is acknowledged. Claims 8, 9 are withdrawn from consideration as being drawn to non-elected invention.

## Claim Analysis

3. The instant claims that recite an over-coating agent are construed as coating compositions comprising a water-soluble polymer and a water-soluble fluorine compound. Prior art compositions that comprise all the elements of the composition are viewed as capable of functioning as over-coating for forming fine patterns.

# Claim Rejections - 35 USC § 102 and 103

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 1713

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 3

6. Claims 1-7 are rejected under 35 U.S.C. 102(b) as anticipated by Nishi et al. (US 5,611,850).

The prior art to Nishi et al. discloses a composition for an anti-reflective coating on resist, which comprises a water-soluble fluorine compound and water as the main components (abstract). Examples of the fluorine-containing organic compounds disclosed include acids such as perfluorobutanesulfonic acid, perfluoroheptanesulfonic acid, perfluorooctanesulfonic acid, perfluorodecanesulfonic acid, perfluoroadipic acid, perfluorooctanoic acid, perfluoroazelaic acid, perfluorosebacic acid etc. Furthermore, as the water-soluble solid fluorine compound (A), the prior art discloses a compound such as 2,2,3,3,4,4,5,5octafluorohexane-1,6-diol (column 3, lines 1-20). The anti-reflective coating composition of the present invention contains these water-soluble fluorine compounds (A) and (B) in a total weight amount of from 1 to 10 wt % to an aqueous solvent. Additionally, the anti-reflective coating composition of the present invention may further contain a film-formable polymer such as polyvinyl alcohol, polyacrylic acid, polyvinyl pyrrolidone and polyvinyl methyl ether in amounts of at most 20 wt %, preferably at most 10 wt %, to the total amount of fluorine compound (column 5, lines 5-14). The instantly claimed over-coating agent has all the components recited in the prior art composition and thus reads on the prior art.

Art Unit: 1713

7. Claims 1-7 are rejected under 35 U.S.C. 102(b) as anticipated by Whitbourne (US 5,001009).

The prior art to Whitbourne discloses hydrophilic coatings which include a hydrophilic polyolefin such as polyvinyl-pyrrolidone and a water-insoluble stabilizing polymer such as a cellulose ester (abstract). The working example in column 8, lines 40-45, discloses a composition comprising a water-soluble polymer, PVP, and trifluoroethanol. Thus, the composition of the instant over-coating agent as recited in *claims 1-7* are anticipated by the prior art.

8. Claims 1, 2, 5, 6 are rejected under 35 U.S.C. 102(b) as anticipated by Miller et al. (US 5,300,394).

Miller et al. disclose aqueous dispersions comprising fluorosurfactant (abstract). The fluorosurfactant may further contain carboxyl groups (column 2, lines 55-65). The dispersions may include 1-100%, more preferably, 0.5-20% based on the weight of the compound (column 5, lines 39-47). The aqueous medium further may further include water-soluble polymers such as polyvinyl alcohol, polyvinyl pyrrolidone, polyethylene oxide etc. (column 6, lines 1-7). Thus, claims 1, 2, 5, 6 are anticipated by Miller et al.

9. Claims 1, 4, 5 are rejected under 35 U.S.C. 102(b) as anticipated by Ishibashi et al. (US 5,554,489).

The prior art to Ishibashi et al. disclose method of forming fine resist pattern using a water-soluble polymer such as polyvinyl amine and polyacrylic acid and a refractive index

Application/Control Number: 10/601,705

Art Unit: 1713

Page 5

controller which includes a fluorine-containing polymer and a fluorine-containing surfactant.

Thus, claims 1, 4, 5 are anticipated by prior art compositions to Ishibashi et al.

### Conclusion

1. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Satya Sastri at (571) 212 1112.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wu can be reached at (571) 212 1114.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <a href="http://pair-direct.uspto.gov">http://pair-direct.uspto.gov</a>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
